

LIST OF TABLES

Chapter 1

Table 1	Reynolds number calculations for a size 2 (0.8 mm) Torch	12
Table 2	Equilibrium compositions of an oxyacetylene flame for adiabatic temperatures at different gas ratios and at less than adiabatic flame temperatures	26
Table 3	The organic compounds and aspects to be investigated.....	47
Table 4	Summary of oxide thicknesses on the pre-growth surfaces for the different types of surface treatment techniques	50

Chapter 2

Table 1	Average Particle densities for the surface roughness treatments	53
Table 2	Regions of highest diamond deposition for the different flame directions and tilt angles	53
Table 3	Normalized particle densities for the grooved samples depending on flame direction and flow rate at a 0=30 degree tilt angle	54
Table 4	Diamond particle densities for the scratched and/or HF dipped samples	56

Chapter 3

Table 1	Summary of oxide thicknesses, diamond particle size, and particle density for the pretreated samples and the control sample	58
Table 2	Aspect of organic compound studied and nature of deposition	62
Table 3	Angles of incidence for the upstream and downstream wall surfaces and their vertical and horizontal components for the different tilt angles (positive values signify below horizontal).....	68
